

Design-A-Seal®

A Decade of Success!

Can you believe it's now 10 years since Norden invented Design-A-Seal®! We knew it would change the way tubes are designed, but the impact it had on the tube filling industry even surprised us. Since its inception, this sealing technique has revolutionized the way tubes are marketed today.

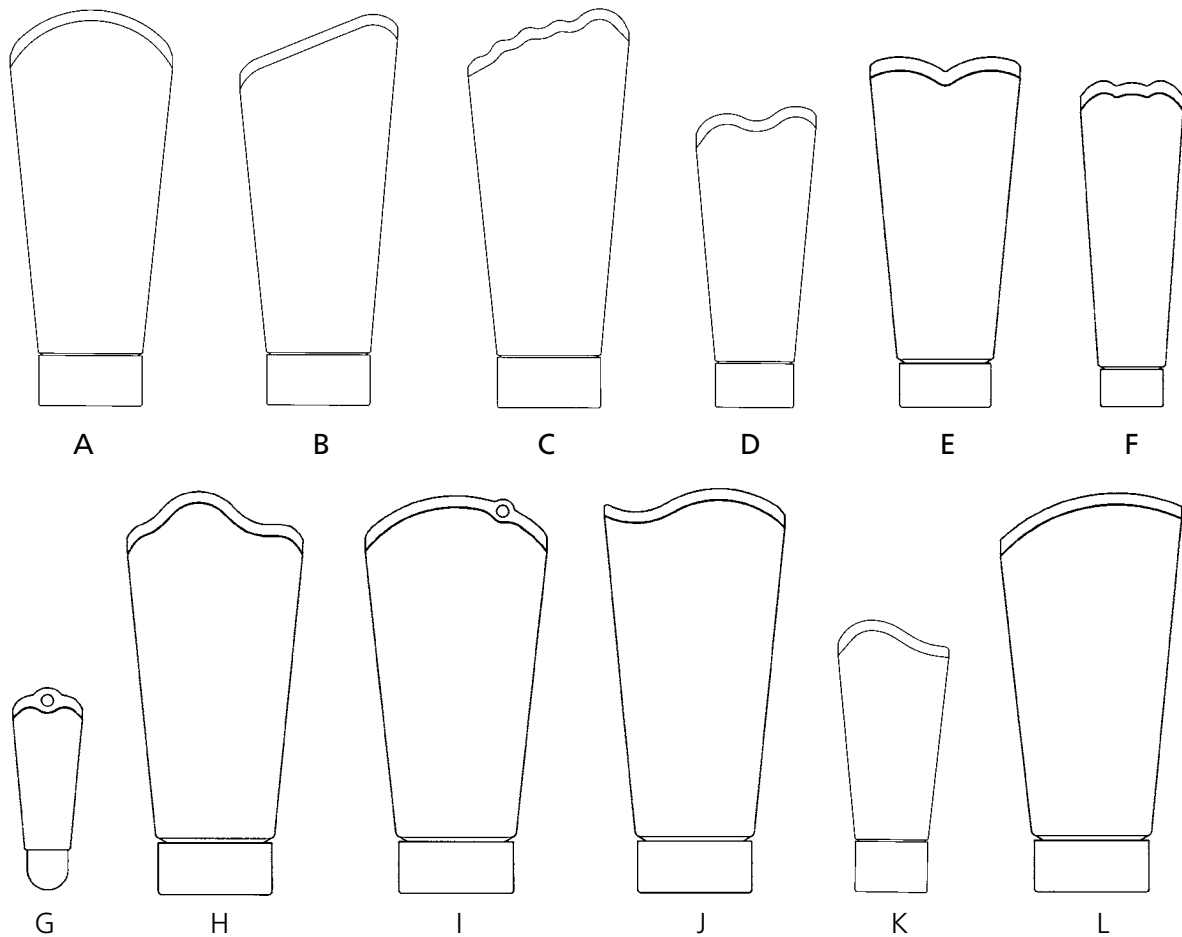

When you look at today's tubes, you will see that more and more products are jumping on the Design-A-Seal® bandwagon. Tubes filled with shampoo, hand creams, lotions, toothpaste, and even food products are making their debut with a unique sealing style. Design-A-Seal® shaping allows products to catch the eye of the consumer quickly when displayed on the shelf. Wouldn't you notice one of these designs first?

As you can see, the possibilities are numerous, but not limited to your imagination. All you have to do is submit a drawing of your seal concept. If you don't have one, you can send your tube samples to us and we will submit a concept for you. It's that simple!

World Leading Supplier of Tube Filling Systems

Since its introduction, Norden has delivered more than 100 DAS machines all over the world. If your machine is not prepared for DAS, don't worry - you too can have Design-A-Seal® on your existing Norden machine. There are just a few additional parts needed, depending on the seal you would like. For instance,

For corner trim, you will need:

- Linear trimming station (replaces rotary drum trimming stations)
- Corner trim tooling
- Straight trim tooling (for exchange back to straight seals)
- Extra tube transport support (provides additional strength to the tube holder chain)

For all other Design-A-Seal® shapes, you will need:

- Higher lift at hot air
- Increased air flow
- Trim waste collection
- DAS style sealing station with overload protection
- Linear trimming station with overload protection
- Hot air station - new style
- Extra tube transport support (provides additional strength to the tube holder chain)
- Straight cut tooling (for exchange back to straight seals)
- DAS size parts
- Cooling station

Don't be left behind with straight sealing! Remember, Norden invented Design-A-Seal®. When it comes to shaped sealing, we know it better than anyone out there. Let Norden help you put a little panache back into your tubes!
